## Clear vision and determination for South Staffordshire Housing Association

South Staffordshire Housing Association was established in 1997 with the promise to provide homes and services for local people.

With a clear vision and the determination to make a difference to people and neighbourhoods the organisation - known to everyone as SSHA - has delivered on our mission to build more than 1,000 new homes, improve our housing stock, offer care and support in rural communities and change lives.

Part of Housing Plus Group, SSHA manages 6,000 properties in Staffordshire, supported by award-winning repairs and maintenance services.

**Q: What led you to engage with Eco Fire Safety?** The literature we received from Eco Fire Safety stipulated they were more financially viable and easier to maintain than regular extinguishers.

We decided to use the P50 after inviting Jason along with Andy Spence from Britannia Fire to present the P50. Once the figures were realised, we knew we had to act quick to get the P50's in place, which we did with 6 of our schemes in the Staffordshire area.

**Q: What benefits do you hope to achieve?** We will significantly reduce the cost in maintenance and repairs. Other key benefits for our organisation was the downtime for our staff caused by arranging service engineers and the security of our residents within the schemes. These added benefits alleviate an extra headache for our staff.

**Q: How did you find EFS during the buying process, installation and aftercare so far?** Eco Fire Safety were very helpful and quick to respond to enquiries and while on site were extremely mindful of our resident's privacy and made sure the installation was efficient and caused no disturbance to them.

**Q: Would you recommend EFS to others?** Yes
