## **The P50 - Learning and Innovation going hand in hand!**

Learning Curve Group is a national training and education specialist working from their new Head Office in Durhamgate, County Durham.

With approximately 450 employees working from 9 premises across the North East and Manchester.

They work with further education providers, employers and learners to help them achieve success.

Since 2004, Learning Curve Group has grown both organically and through acquisition to become one of the largest and most diverse providers in the country.

Eco Fire Safety made a trip to the North East to survey the new Head Office and worked in partnership with Mark Fletcher (Health & Safety Manager for Learning Curve), to make sure the new premises were provisioned with enough fire extinguisher cover.

**"While completing a recent fire safety course I had exposure to the P50 fire extinguisher however I had no reason to use them in the role I was doing."**

Eco Fire Safety were very vocal about the P50 extinguisher, though I was already aware of its benefits. So I engaged with Jason initially who couldn't do enough to help me from initial contact to commissioning." explained Mark.

**"Having been used to a variety of different extinguishers in various areas of a building in previous roles, using a P50 will make it easier for fire wardens to fight small fires should the need arise. Having one extinguisher takes away any doubt about which one to use for a fire."** confirmed Mark.

Eco Fire Safety have showed their commitment to Learning Curve Group, ensuring a first-class service and the ability to work in partnership with their customers, handing back the responsibility of their Fire Safety and control of their costs.

**"The fact that I can service the extinguisher myself and it has a 10-year guarantee was a very easy sell to the finance director and the service received from EFS from day 1 has been exemplary and I will have no problems about using them again or recommending them going forward."** added Mark.
